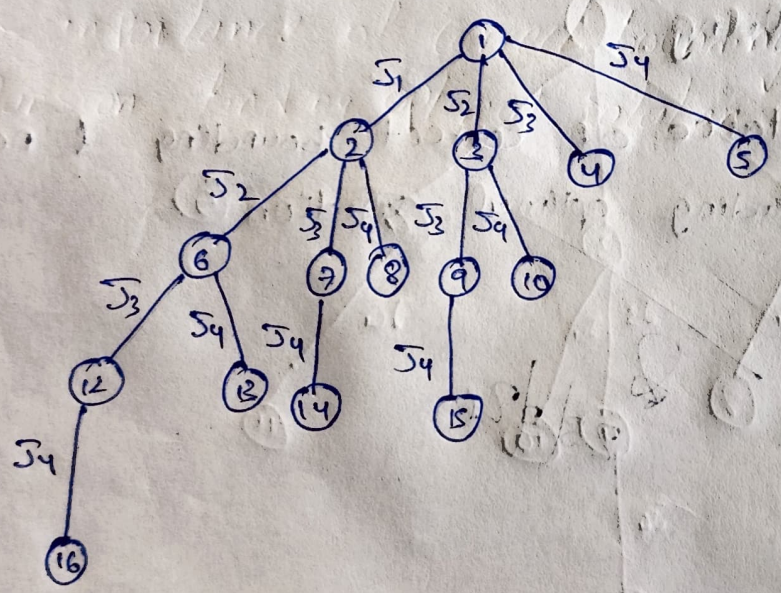
DAA ALM - 7

K. vinay Bhargav Reddy
2400031280.

procedure:

* 0/1 knapsack problem has constraints such as capacity, item weight and profit.
* This Branch and Bound technique also used to solve.
* 0/1 using constraints using Branch & Bound using fifo consider Job's 4:



Queue:

~~1~~	~~2~~	~~3~~	~~4~~	~~5~~	~~6~~	~~7~~	~~8~~	~~9~~	~~10~~	~~11~~	~~12~~	~~13~~	~~14~~	~~15~~	~~16~~

-) Branch and Bound is again divided into 3 methods

1) Least cost Branch and Bound
2) first in first out Branch & Bound.
3) last in first out Branch & Bound.

outcomes:

-> I understood the optimization constraints involved in the knapsack problem.

-> I learned how Branch & Bound reduces the unnecessary computations by pruning codes.

-> I was able to identify the optimal profit using fifo exploration.

-> this activity improved my analytical thinking & problem solving.

-> this importance of correct bounding & node expansion finding optimal solution.
